Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1.   (Currently Amended) A communication system, comprising:

a printing unit that is controlled to print an image on a recording medium;

a scanning unit that is controlled to scan an image;

an accessing system that connects with a web page though a network in response to an operation of a user;

a first print controller that controls said printing unit to print the web page accessed by said accessing system on a first recording medium;

a determination unit that determines whether the web page accessed using said accessing system includes an input field in which data is to be input by the user and the data input in the input field is to be transmitted to a predetermined destination;

a second print controller that operates such that, when the determination unit determines that the web page accessed using said accessing system includes an input the input field in which data the data is to be input by the user and the data input in the input field being to be transmitted to a predetermined the predetermined destination, said second print controller controls said printing unit to print an image having at least a fill-in area corresponding to the input field, the fill-in area being to be filled in by the user, and a destination area indicating the destination defined by the web page on a second recording medium;

a scan controller that controls said scanning unit to scan the second recording medium having been filled in by the user to capture an image thereof;

a recognition system that recognizes contents written in the fill-in area and the destination area based on the image of the second recording medium scanned by said scanning unit under control of said scan controller; and

a data transmitting system that transmits contents written in the fill-in area and recognized by said recognition system to the destination printed in the destination area and recognized by said recognition system.

2.   (Original) The communication system according to claim 1,

wherein said second print controller is configured to examine whether the web page accessed with said accessing system includes term data representing an effective term of the web page, said second print controller controls said printing unit to print an image having a term area related to the term data as well as the fill-in area and the destination area on the second recording medium,

wherein said recognition system is configured to recognize contents printed in the fill-in area, the destination area and the term area of the image scanned by said scanning unit,

wherein said communication system further comprises a term examining system that determines whether a current date/time is later than a term that is printed in the term area of the second recording medium and recognized by said recognition system, and

wherein said data transmitting system is configured to transmits the contents written in the fill-in area to the destination indicated by the contents in the destination area only when said term examining system determines that the current date/time is on or before the term extracted from the term area of the second recording medium.

3.   (Original) The communication system according to claim 2, further comprising a notifying system that notifies a user of said communication system that the current date/time is later than the effective term of the web page when said term examining

system determines that the current date/time is later than the term extracted from the term area of the second recording medium.

4.   (Original) The communication system according to claim 1,

wherein said second print controller is configured to examine whether the web page accessed with said accessing system includes a modified time data representative of a date/time when the contents of the web page were lastly modified, said second print controller controls said printing unit to print an image having a last-modified time area representing the last modified date/time of the web page and an access data area having access data that was referred to when said accessing system accessed the web page as well as the fill-in area and the destination area on the second recording medium,

wherein said recognition system is configured to recognize contents printed in the fill-in area, the destination area, the last-modified time area and the access data area of the image scanned by said scanning unit,

wherein said communication system further comprises:

a modified date/time obtaining system that obtains the last-modified date/time from the web page with reference to the data in the access data area; and

a modified date/time examining system that examines whether the last-modified date/time obtained by said modified date/time obtaining system coincides with a date/time that is printed in the last-modified date/time area and recognized by said recognition system,

wherein said data transmitting system is configured to transmits the contents written in the fill-in area to the destination indicated by the contents in the destination area only when said modified date/time examining system determines that the last-modified date/time obtained by said modified date/time obtaining system coincides with a date/time printed in the last-modified date/time area and recognized by said recognition system.

5.   (Original) The communication system according to claim 4, further comprising a notifying system that notifies a user of said communication system that the last-modified date/time obtained by said modified date/time obtaining system does not coincide with a date/time that is extracted from the last-modified date/time area of the second recording medium when said modified date/time examining system determines that the last-modified date/time obtained by said modified date/time obtaining system does not coincide with a date/time printed in the last-modified date/time area of the second recording medium and recognized by said recognition system.

6.   (Original) The communication system according to claim 1, wherein, when the web page accessed with said accessing system includes a plurality of groups of input fields, the input fields falling within a same group having a same destination, the input fields falling within different groups having different destinations, said second print controller controls said printing unit to print an image having at least the fill-in area and the destination area on different second recording mediums for different groups of input fields.

7.   (Original) The communication system according to claim 1, wherein, when the web page accessed with said accessing system includes a plurality of groups of input fields, the input fields falling within a same group having a same destination, the input fields falling within different groups having different destinations, said second print controller controls said printing unit to print an image having at least the fill-in area and the destination area on the same second recording medium regardless whether the plurality of input fields fall within the different groups.

8.   (Currently Amended) A communication terminal, comprising:

a printing unit that is controlled to print an image on a recording medium;

an accessing system that connects with a web page though a network in response to an operation of a user;

a first print controller that controls said printing unit to print the web page accessed by said accessing system on a first recording medium; ~~and~~

a determination unit that determines whether the web page accessed using said accessing system includes an input field in which data is to be input by the user and the data input in the input field is to be transmitted to a predetermined destination;

a second print controller that operates such that, when the determination unit determines that the web page accessed using said accessing system includes ~~an input~~ the input field in which ~~data~~ the data is to be input by the user and the data input in the input field being to be transmitted to ~~a predetermined~~ the predetermined destination, said second print controller controls said printing unit to print an image having at least a fill-in area corresponding to the input field, the fill-in area being to be filled in by the user, and a destination area indicating the destination defined by the web page on a second recording ~~medium~~medium;

a scanning unit that is controlled to scan an image;

a scan controller that controls said scanning unit to scan the second recording medium having been filled in by the user to capture an image thereof;

a recognition system that recognizes contents written in the fill-in area and the destination area based on the image of the second recording medium scanned by said scanning unit under control of said scan controller; and

a data transmitting system that transmits contents written in the fill-in area and recognized by said recognition system to the destination printed in the destination area and recognized by said recognition system.

9.   (Canceled)

10.   (Currently Amended) The communication terminal according to ~~claim 9~~claim 8,

wherein said second print controller is configured to examine whether the web page accessed with said accessing system includes term data representing an effective term of the web page, said second print controller controls said printing unit to print an image having a term area related to the term data as well as the fill-in area and the destination area on the second recording medium,

wherein said recognition system is configured to recognize contents printed in the fill-in area, the destination area and the term area of the image scanned by said scanning unit,

wherein said communication terminal further comprises a term examining system that determines whether a current date/time is later than a term that is printed in the term area of the second recording medium and recognized by said recognition system, and

wherein said data transmitting system is configured to transmits the contents written in the fill-in area to the destination indicated by the contents in the destination area only when said term examining system determines that the current date/time is on or before the term extracted from the term area of the second recording medium.

11.   (Original) The communication terminal according to claim 10, further comprising a notifying system that notifies a user of said communication terminal that the current date/time is later than the effective term of the web page when said term examining system determines that the current date/time is later than the term extracted from the term area of the second recording medium.

12.   (Currently Amended) The communication terminal according to ~~claim 9~~claim 8,

wherein said second print controller is configured to examine whether the web page accessed with said accessing system includes a modified time data representative of a date/time when the contents of the web page were lastly modified, said second print controller

-7-

controls said printing unit to print an image having a last-modified time area representing the last modified date/time of the web page and an access data area having access data that was referred to when said accessing system accessed the web page as well as the fill-in area and the destination area on the second recording medium,

wherein said recognition system is configured to recognize contents printed in the fill-in area, the destination area, the last-modified time area and the access data area of the image scanned by said scanning unit,

wherein said communication terminal further comprises:

a modified date/time obtaining system that obtains the last-modified date/time from the web page with reference to the data in the access data area; and

a modified date/time examining system that examines whether the last-modified date/time obtained by said modified date/time obtaining system coincides with a date/time that is printed in the last-modified date/time area and recognized by said recognition system,

wherein said data transmitting system is configured to transmits the contents written in the fill-in area to the destination indicated by the contents in the destination area only when said modified date/time examining system determines that the last-modified date/time obtained by said modified date/time obtaining system coincides with a date/time printed in the last-modified date/time area and recognized by said recognition system.

13.   (Original) The communication terminal according to claim 12, further comprising a notifying system that notifies a user of said communication terminal that the last-modified date/time obtained by said modified date/time obtaining system does not coincide with a date/time that is extracted from the last-modified date/time area of the second recording medium when said modified date/time examining system determines that the last-modified date/time obtained by said modified date/time obtaining system does not coincide

with a date/time printed in the last-modified date/time area of the second recording medium and recognized by said recognition system.

14. (Currently Amended) The communication terminal according to ~~claim 9~~claim 8, wherein, when the web page accessed with said accessing system includes a plurality of groups of input fields, the input fields falling within a same group having a same destination, the input fields falling within different groups having different destinations, said second print controller controls said printing unit to print an image having at least the fill-in area and the destination area on different second recording mediums for different groups of input fields.

15. (Currently Amended) The communication terminal according to ~~claim 9~~claim 8, wherein, when the web page accessed with said accessing system includes a plurality of groups of input fields, the input fields falling within a same group having a same destination, the input fields falling within different groups having different destinations, said second print controller controls said printing unit to print an image having at least the fill-in area and the destination area on the same second recording medium regardless whether the plurality of input fields fall within the different groups.

16. (Currently Amended) A communication terminal, comprising:

a scanning unit that is controlled to scan an image;

an accessing system that connects with a web page;

a determination unit that determines whether the web page accessed using said accessing system includes a fill-in area in which a user writes a character string and a destination area indicating a destination to which the data corresponding to the character string filled in the fill-in area is transmitted;

a scan controller that controls said scanning unit to scan a recording medium on which an image having at least ~~a fill-in~~ the fill-in area in which the user writes ~~a character~~ the character string and ~~a destination~~ the destination area indicating ~~a destination~~ the

destination to which data corresponding to the character string filled in the fill-in area is transmitted, when it is determined that the web page accessed using said accessing system includes the fill-in area in which the user writes the character string and the destination area indicating the destination to which the data corresponding to the character string filled in the fill-in area is transmitted;

a recognition system that recognizes contents written in the fill-in area and the destination area based on the image of the recording medium scanned by said scanning unit under control of said scan controller; and

a data transmitting system that transmits contents written in the fill-in area and recognized by said recognition system to the destination printed in the destination area and recognized by said recognition system.

17.   (Currently Amended) A computer program product A computer-readable storage medium that stores a computer-executable program that defines a procedure to be executed by a computer for communicating using a web page, the computer program product comprising the instructions of: the program comprising:

instructions for accessing a web page though a network in response to an operation of a user;

instructions for printing the web page as accessed on a first recording medium;

instructions for determining whether the web page accessed using said accessing system includes an input field to be input by the user and data input in the input field is to be transmitted to a predetermined destination;

instructions for printing an image having at least a fill-in area to be filled in by the user and a destination area indicating a destination the destination to which data the data corresponding to the fill-in area is to be transmitted on a second recording medium when it is determined that the web page includes an input the input field in which data the data is to be

-10-

input by the user and the data input in the input field being to be transmitted to a

predetermined destination, the fill-in area corresponding to the input field, the predetermined

destination being represented in the destination area;

instructions for ~~a scanning~~ scanning the second recording medium having been

filled in by the user to capture an image thereof;

instructions for ~~a recognizing~~ recognizing contents written in the fill-in area

and the predetermined destination indicated in the destination area based on the image of the

second recording medium; and

instructions for transmitting contents written in the fill-in area and recognized

in the step of recognizing to the predetermined destination recognized in the step of

recognizing.

18.   (Currently Amended) ~~A computer program product defining a procedure to be~~
~~executed by a computer~~ A computer-readable storage medium that stores a computer-

executable program for printing data related to a web page, ~~the computer program product~~
~~comprising the instructions of:~~ the program comprising:

instructions for accessing a web page though a network in response to an

operation of a user;

instructions for printing an image of the web page as accessed on a first

recording medium; and

instructions for determining whether the web page accessed using said

accessing system includes an in-put field in which data is input by the user and the data input

in the field is to be transmitted to a predetermined destination;

instructions for printing an image having at least a fill-in area and a destination

area when it is determined that the web page includes an input field in which data is to be

input by the user and the data input in the input field being to be transmitted to a

predetermined destination, the fill-in area corresponding to the input field, the fill-in area being to be filled in by the user, the destination area indicating the destination defined by the web page.

19.   (Canceled)

20.   (Currently Amended) A method of communicating using a web page, comprising the steps of:

accessing a web page though a network in response to an operation of a user;

printing the web page as accessed on a first recording medium;

determining whether the web page includes an input field in which data is to be input by the user and the data input in the input field is to be transmitted to a predetermined destination;

printing an image having at least a fill-in area to be filled in by the user and a destination area indicating a destination to which data corresponding to the fill-in area is to be transmitted on a second recording medium when it is determined that the web page includes an input field in which data is to be input by the user and the data input in the input field being to be transmitted to a predetermined destination, the fill-in area corresponding to the input field, the predetermined destination being represented in the destination area;

a scanning the second recording medium having been filled in by the user to capture an image thereof;

a recognizing contents written in the fill-in area and the predetermined destination indicated in the destination area based on the image of the second recording medium; and

transmitting contents written in the fill-in area and recognized in the step of recognizing to the predetermined destination recognized in the step of recognizing.

21-22. (Canceled)

23.   (New) The communication system according to claim 1,

wherein the second print controller generates a print form or an image data of an input sheet to be printed based on the web page which is determined, by the determination unit, to include the input field.

24.   (New) The communication terminal according to claim 8,

wherein the second print controller generates a print form or an image data of an input sheet to be printed based on the web page which is determined, by the determination unit, to include the input field.

25.   (New) The computer-readable storage medium according to claim 17, the program further comprising:

instructions for generating a print form or an image data of an input sheet to be printed based on the web page which is determined to include the input field.

26.   (New) The computer-readable storage medium according to claim 18, the program further comprising:

instructions for generating a print form or an image data of an input sheet to be printed based on the web page which is determined to include the input field.

27.   (New) The method of communicating using a web page according to claim 20, further comprising the step of:

generating a print form or an image data of an input sheet to be printed based on the web page which is determined to include the input field.
